

'Service Sheet for C30 Locomotive'

Power Requirements: The locomotive operates on 12Volts DC power. See you favourite model rail stockist for options on Power Controllers and starter track packs to get you running. If wanting to fit a DCC chip, please see the web site for instructions.

Warranty: The vehicles in the train pack are all covered by a Manufacturer's warranty for 12 months. Please retain proof of purchase for the unlikely event of a warranty claim. The warranty covers the cost of the replacement parts and labour to install the same.

Locomotive:

Prior to running, wipe any surplus manufacturing lubricant from beneath the locomotive bogies using a clean dry cloth.

The locomotive has a sealed can motor and does not require any specific maintenance.

Keep the locomotive wheels clean preferably using dry cleaning techniques. Wet cleaning is still ok provided using a non-hazardous cleaning product on a soft cloth. Avoid using solvent based cleaning solution as contact with plastic components can cause damage and is not covered by warranty.

To access the inside of the locomotive, carefully extend the body shell outwards and over the two tabs located on the chassis as shown on #1

Take care when lubricating and avoid using excess oil. Apply a small drop of sewing machine oil at the points indicated as shown #2 after 15 hours of operation

Fit handrails and horns using a small drop of plastic cement in the matching openings. Check the item fits the opening prior to applying the cement

If wanting to kit Kadee couplers, cut off the factory couplers from the bogies. Use the fitting provided for the cow catchers as shown on #4. Note the Kadee couplers are not included with the model

For fitting the snow clearing bumper to cow catcher, use the small drop of plastic cement as shown on #5
